Reference Letter

The landfill owned by our company is located on a plain, relatively far away from residential areas. Constant winds around our landfill often cause the spreading of light fractions not only within the landfill area, but also outside it. This problem requires regular cleaning of the surrounding area, which is carried out manually by our landfill staff. This extra work, given the small number of employees in the company, has a strong negative impact on their efficiency while performing their main duties.

For several years, we have been looking for ways to tackle this problem. Screens were installed to stop the spread of light fractions, heavier fractions were used to cover the working face of the landfill, but this did not produce the desired results.

In May this year, we signed a pilot contract with SIA RSGA for the Alternative Daily Coverage service to cover an area of about 4000 m². The result was surprising, as the light fraction waste no longer spread from the covered area.

Our company is completely satisfied with the quality of SIA RSGA Alternative Daily Coverage and we would definitely recommend SIA RSGA as a reliable business partner that performs its duties responsibly and to a high standard. We also plan to include expenses on regular coverage in our company budget.

Yours faithfully,

SIA "Vidusdaugavas SPAAO"

Chair of the Board

Jānis Bisenieks
